**ALMANDOZ FRANCO Rodrigo**  
**BRANDI Mattia**

## Goals of the system

**[G1] Companies easily find suitable students for their internships.**

**[G2] University students easily manage applications for internships matching their skills.**

**[G3] Companies and Students have a smooth internship experience.**

## Boundaries of the system

RASD

### **Why the system exists?**

**[WP1]** : University student wants to be part of an internship.

### **How the actors interact with the system**

**[SP5]** : Students might accept a suitable recommendation of a Company on S&C

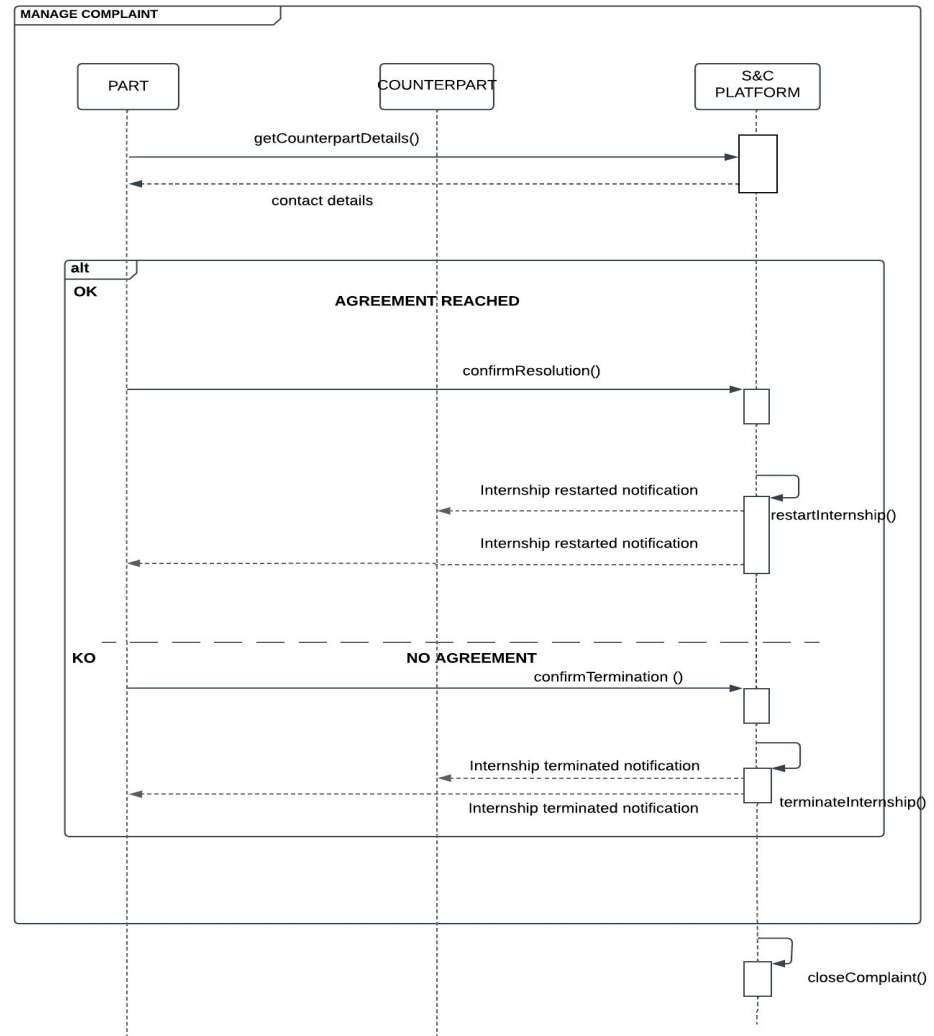

### **How the system interacts with actors**

**[SP13]** : S&C establishes a contact once the recommendations is accepted

## Meaningful Use Case

### [UC15] - Manage Complaint

Use case description at page 31 and image at page 46 of the RASD Document.

## Important Requirements

**[R2]** The system allows Universities and Companies to sign an agreement for registering in the S&C platform.

**[R3]** The system allows Companies to create and publish the internships (projects and terms) they offer.

**[R18]** The system allows Companies to finalize the selection of the best candidates.

## Important Assumptions

-  **[D2]** Companies provide accurate and updated internship details.
-  **[D3]** Students upload valid and accurate CVs and personal information.
-  **[D7]** Feedback and complaints mechanisms are properly and honestly used by all users.

**AND**

**=**

## **Alloy Model Analysis and Aim**

**Validation of Key Constraints**

**Detection of Logical Flaws**

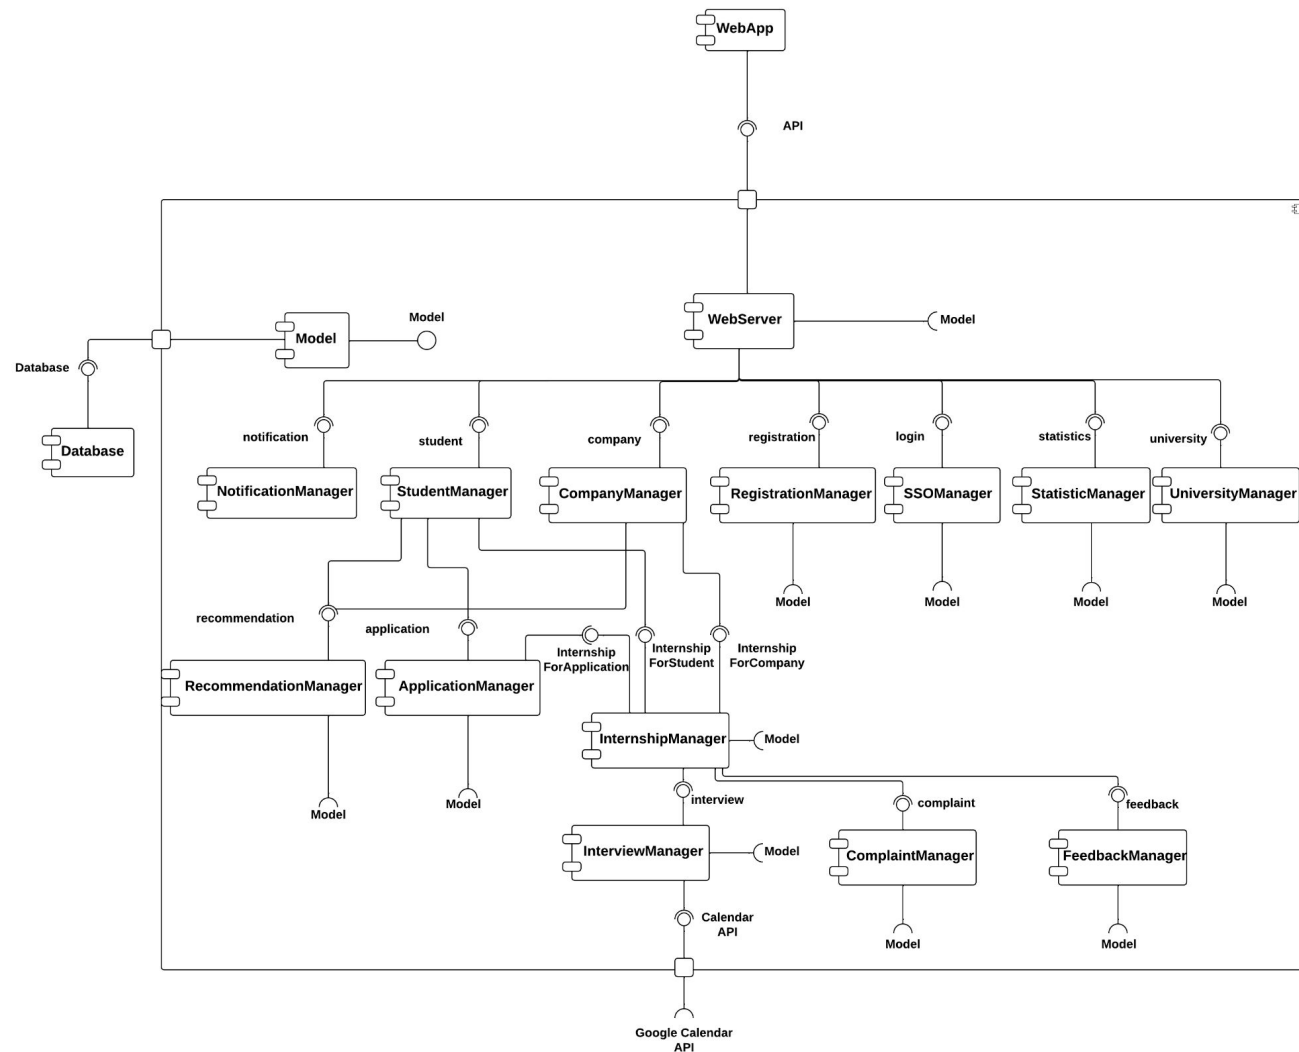

**Simulation of Workflows**

DD

## Components and Interfaces of the system
